

F425G

25% ZINC

SPECIFICATIONS

Guaranteed Analysis:	Zinc, weight %	25.00%
Typical Analysis:	Sulphur, weight %	8.00%
Bulk Density:	lbs. per cubic foot	80
Particle Size:	Size Guide Number [SGN]	250 to 270
Physical Appearance:	Greyish Brown Granules	

PACKAGING

25 Kg Bags, 1,000 Kg Bags or Bulk

AGRONOMIC CONSIDERATION

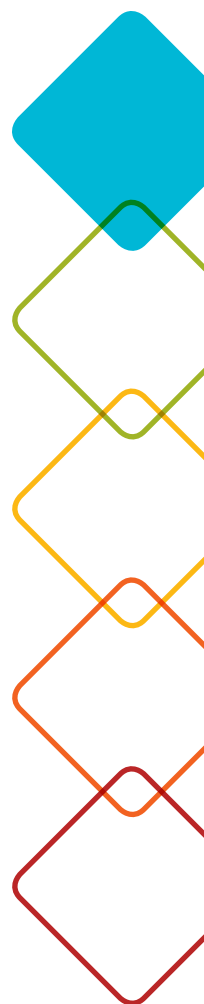

A homogeneous grade of zinc sulphate and zinc oxide with a low analysis to insure a better distribution throughout the fertilizer blend and in the field. Optimum water solubility provides excellent plant availability and compatibility with all fertilizer blends. Product analysis of 25% zinc for use in blends will supply initial amount of zinc sulphate for immediate needs, and zinc oxide for soil buildup and extended plant needs.

GENERAL RECOMMENDATIONS

Use 4 lbs. of F425G for every pound of zinc required to meet needs. Normally apply at a minimum of 2 lbs. of actual zinc, 8 lbs. of product per acre.

MANUFACTURING CONSIDERATIONS

Normal bulk blending procedures. Use F425G to match analysis where higher amounts of zinc are needed. Apply in the seed row or in close proximity to the seed row.
