

SUPER CAL SO4 PELLETIZED GYPSUM – CALCIUM SULPHATE

SPECIFICATIONS

Analysis:	Calcium [Ca]	21%
	Sulfur [S]	17%
Bulk Density:	lbs. per cubic foot	61
Particle Size:	Size Guide Number [SGN].....	250
Physical Appearance:	Light Gray	

PACKAGING

Bulk

AGRONOMIC CONSIDERATION

Pelletized Calcium Sulphate is an effective source of both Calcium and Sulphur. It is produced from high quality mined Calcium Sulphate, finely ground for maximum utility, blended with a special water-soluble organic binder and manufactured into mini pellets. It is then dried to less than 1% moisture and screened to size.

GENERAL RECOMMENDATIONS

Apply to soils high in sodium where the water is percolating through the soil profile. The calcium in gypsum will displace the sodium off of the soil colloid. This will effectively help to leach the displaced sodium out of the soil profile.

MANUFACTURING CONSIDERATIONS

For best results Super CAL SO4 should be broadcast and incorporated.
